

OPTICROP: SMART AGRICULTURAL PRODUCTION OPTIMIZATION ENGINE

CUSTOMER JOURNEY MAP

1. Overview of the User Journey

This map outlines the path Rajesh takes when interacting with the OptiCrop system, from soil sampling to harvesting, highlighting key actions, touchpoints, pain points, and system opportunities:

Phase	Actions	Touchpoints	Pain Points	System Opportunities
1. Sampling	Collects soil, obtains NPK & PH levels	Local testing lab	Slow lab reports, manual record-keeping	Provide advice on how to sample
2. Accessing	Navigates to OptiCrop portal, authenticates	Web Portal Login	Unstable network, authentication hurdles	Create lightweight glassmorphic
3. Input	Inputs N, P, K, pH, temp, rainfall and season	Optimization Form	Form confusion, units mapping errors.	Add input validation and default
4. Predict	Submits inputs, gets crop recommendation & yield	Results Panel	Slow calculations, complex statistics.	Return instant visual indicators
5. Actions	Applies prescribed fertilizers, plants crop	Field Application	Lack of step-by-step guidance	Generate clear NPK corrective instructions
6. Harvest	Grows crop, records final harvest yield	Yield Log Form	Manual data entry, lack of incentive	Incorporate harvest results to update
